MDNR Westlake OU1 MMP draft comments.pdf

Mike,

The Missouri Department of Natural Resources has completed its review of the Materials Management Plan for Westlake Landfill Operable Unit 1 and is transmitting the attached draft comments. I am sending the comments in draft form due to the fact that my section chief, Larry Erickson, is out of the office until Thursday of this week and I would like his approval on the final draft. I will send you a hard copy of the final draft by the end of next week. I do not anticipate much change from the draft.

As of this transmittal, we have not received the radionuclide results for the Coal Combustion Byproduct (CCB).

Thank you for the opportunity to review and comment on the plan. If you have any questions or need further clarification on any of the comments, feel free to give me a call.

Subject CCB Radionuclide Analytical Results

Paul,

During our conference call concerning OU2 today, we discussed the status of the Materials Management Plan, and MDNR indicated that it probably will have its comments to us by tomorrow afternoon. I mentioned that we have the Coal Combustion Byproduct (CCB) radionuclide analytical results back, and we discussed whether we should forward it to Dan. We agreed that you should forward the analytical results to Dan and MDNR (Shawn Muenks, Eric Gilstrap, and Darrick Steen). Also, please explain how we anticipate using the CCB (as fill to achieve grade, to fill the voids in the armor layer, etc., but not as a component of the final cover).

Would you forward the radionuclide analytical results to them? Thanks.

Mike
